

NOISE TO SIGNAL RobCottingham.com
@robcottingham

```
Terminal  
~$ whoami  
You are! You are!
```

LINUX BASICS

Let's Begin!

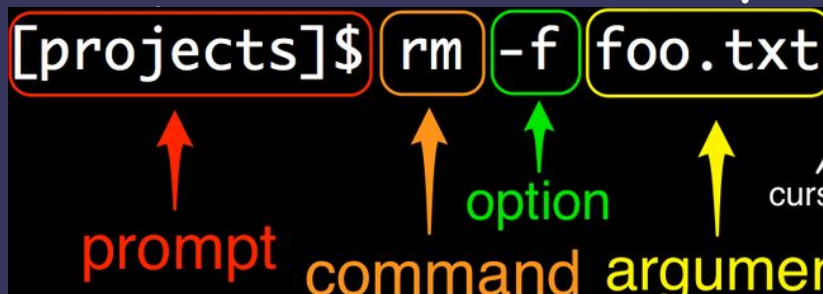

What is the command line?

Text based interface for users to write instructions to computer

How it works

- Type after the prompt
- Hit enter to execute
- Successful if prompt shows up again on the next line

The diagram shows a terminal prompt and command: `[projects]$ rm -f foo.txt`. The components are color-coded and labeled with arrows: `[projects]$` is the prompt (red box, red arrow, red label 'prompt'); `rm` is the command (orange box, orange arrow, orange label 'command'); `-f` is the option (green box, green arrow, green label 'option'); and `foo.txt` is the argument (yellow box, yellow arrow, yellow label 'argument'). A small 'cursor' label is visible to the right of the argument.

```
[projects]$ rm -f foo.txt
```

prompt command option argument

Basic commands

- ls
- pwd
- cd

Clear – clean up screen

More basic commands

- top
- man ls

```
[root@localhost ~]# ping -q fa.wikipedia.org
PING text.pmtpa.wikimedia.org (208.80.152.2) 56(84) bytes of data.

```

STUCK? Hit ctrl-c

Create a file

touch wonderfile ← filename

```
ubuntu@ip-10-40-0-174:~$ touch wonderfile
ubuntu@ip-10-40-0-174:~$ ls
Desktop      Downloads  Music      Programming  recover.txt  Videos
Documents   FunFile    Pictures    Public       Templates    wonderfile
ubuntu@ip-10-40-0-174:~$ |
```

Explore files

- gedit &
- cat
- more/less
- head/tail
- > vs >>
- tar
- file
- wc (bytes, words, lines)

More fun with file and directories!

- mkdir
- mv
- cp
- rm

You can modify the behavior of commands by adding flags

- `ls -R`
- `ls -l`
- `ls -a`
- `ls -al`
- `ls --help`
- `rm -r`

```
ubuntu@ip-10-40-0-174:~/Sandbox$ ls -R
.:
fundir  hithere  wonderfile

./fundir:
wonderfile
ubuntu@ip-10-40-0-174:~/Sandbox$ |
```

```
ubuntu@ip-10-40-0-174:~/Sandbox$ ls -l
total 4
drwxrwxr-x 2 ubuntu ubuntu 4096 Jul 10 14:53 fundir
-rw-rw-r-- 1 ubuntu ubuntu  0 Jul 10 14:55 hithere
-rw-rw-r-- 1 ubuntu ubuntu  0 Jul 10 14:55 wonderfile
ubuntu@ip-10-40-0-174:~/Sandbox$ |
```

Permissions (chmod)

- Owner
- Group
- Public (everyone)
- Read
- Write
- Execute

```
-rw-rw-r-- 1 ubuntu ubuntu 1679 Jun 13 22:08 funFile
```

-	r	w	x	r	w	x	r	w	x
Is this a directory or other special file?	Can the owner read it?	Can the owner write to it?	Can the owner execute it?	Can the group read it?	Can the group write to it?	Can the group execute it?	Can anyone read it?	Can anyone write to it?	Can anyone execute it?

Overarching principle: Least privilege

- Grant something the absolute minimum permission it needs to do its job
 - What are these?
 - New file needs to be read by people, and written to by the owner
 - Application needs to be able to run

Change permissions

- Chmod <permission#> <file/directory name>

$0_8 = 000_2$
 $1_8 = 001_2$
 $2_8 = 010_2$
 $3_8 = 011_2$
 $4_8 = 100_2$
 $5_8 = 101_2$
 $6_8 = 110_2$
 $7_8 = 111_2$

user			group			others
